Job Title: Software QA Engineer & Tester

Company Name: J-Mack Technologies

Share

Description

Seeking Software Quality Assurance Engineer and Tester professionals with experience developing and executing software test plans to identify software problems and their causes. This position is a remote, full-time position.

At J-Mack Technologies, we deliver software solutions that help organizations integrate data, automate decisions, and optimize their operations. We support a large government organization with the mission to care for United States Veterans and their families. They manage benefit programs desperately needed by the diverse Veteran community they serve. Our team develops the tools to help administer these programs so that those in need are provided services quickly, securely, and with the consideration they deserve.

You'll analyze users' needs and target environments to ensure solutions are developed consistent with current architecture. Our solutions leverage the latest technologies, including cloud and machine learning.

Responsibilities include:

- Collaborate with the development and/or requirements team to assist in testing applications
- Design detailed, comprehensive, and well-structured test plans and test cases
- Identify, document, and track software defects and inconsistencies.
- Worked closely with developers to resolve bugs.
- Follow Agile Software Engineering and development practices
- Participate in design and code reviews to understand the functionality and provide input on potential quality issues
- Develop, maintain, and enhance test automation frameworks and scripts.
- Suggest improvements and optimizations for quality assurance processes and testing methodologies
- Develop and implement quality control methodologies to ensure compliance with quality assurance standards, guidelines, and procedures in a large computer-based organization
- Develop and define major and minor characteristics of quality, including quality metrics and scoring parameters, and determine requisite quality control resources
- Establish and maintain a process for evaluating hardware, software, and associated documentation and support assessments
- Conduct formal and informal quality reviews throughout the development life cycle

- 5+ Years of Relevant IT Experience Required
- Bachelor of Science (BS) in Computer Science, Electronic Engineering, or other engineering/technical discipline. Alternatively, 8 additional years of experience may be substituted for education.
- Ability to obtain Background Investigation Clearance.
- Familiar with Selenium and/or Cypress test framework and REST API Testing.
- Experience with Java, Javascript.
- Experience with Git.

Additional desired experience but not required include:

- Experience using the Appian Platform
- Familiarity with Jira or Rally

Benefits

- Medical, Dental, and Vision Insurance: J-Mack covers 80% of employee premiums and 50% of dependent premiums.
- Basic Life, Short-Term Disability, and Long-Term Disability: J-Mack covers 100% of the costs.
- 401(k) Saving Plan: Safe Harbor Plan with full vesting and 4% company matching.
- Paid Time Off: 120 Hours Annually (160 Hours Annually after 5 Years with J-Mack)
- Holidays: 11 Paid Holidays
- Charity Matching: J-Mack will match employee donations up to \$250 annually
- Charity Outreach: J-Mack donates 10% of profits to various charities annually
