### Job Title: QA Tester

### Company Name: Codekeeper

Share   

Are you a skilled QA/APP Tester looking for a challenging and rewarding opportunity? Codekeeper is looking for a meticulous and analytical person with profound experience in QA App Testing; familiarity with automated testing, and utilizing tech stacks such as Playwright and Puppeteer, is a pré. Join us in a dynamic role that demands creativity, teamwork, and a dedication to excellence. We're accepting applications for the next two months and will fill the position as soon as we find the perfect match.

### Role Description:

In the role of a QA/App Tester, you will assume a pivotal role in ensuring the premium quality and functionality of the application. You will undertake thorough exploration across various scenarios, conducting comprehensive testing to identify and rectify potential anomalies, thereby cultivating a better user experience. You will apply a systematic, detailed, and analytical approach in discerning and reporting any discrepancies, thereby guaranteeing the seamless operation of our company's solutions.

### Key Responsibilities:

- **Pre-Launch Feature Validation:** Conduct thorough testing on staging environments, ensuring new features perform impeccably before they reach our customers. This involves simulating real-world scenarios to validate functionality, usability, and integration with existing features.
- **Diligent Bug Reporting:** Identify and document any discrepancies, glitches, or bugs discovered during testing. Articulate the necessary changes clearly and concisely, facilitating swift understanding and action by the development team to refine and perfect our app.
- **Comprehensive User Flow Testing:** Commit to ensuring our app delivers a flawless user experience by meticulously testing all user scenarios and flows. This includes exploring every possible interaction within the app to guarantee intuitive and error-free navigation for all users.
- **Rapid Issue Verification:** Act promptly when customers or team members flag potential issues. Test to replicate reported problems and provide detailed reports to the development department, ensuring any concerns are addressed swiftly and effectively, minimizing user impact.
- **Post-Launch Quality Assurance:** Continue testing on production environments after new features are launched. This crucial step ensures that updates integrate seamlessly into the user experience, maintaining and enhancing the quality our customers expect and deserve.
- **Cross-platform Testing:** Shall ensure the application functions correctly across different devices, operating systems, and browsers. This shall include testing on mobile devices,

tools and frameworks. This shall include unit tests, integration tests, and end-to-end tests to validate the application's performance, reliability, and scalability across different environments and platforms

### More about Codekeeper:

Codekeeper was founded by tech industry professionals to revolutionize software escrow for the cloud era. We offer state-of-the-art software escrow solutions that mitigate third-party risks in business operations. As a remote-first company with a central office in The Hague, we prioritize a healthy, resilient organization to support the development of our robust app.

For more information, visit our website: <https://codekeeper.co/>

### What We Offer:

- Passionate and fun-loving colleagues
- Startup mindset with ample opportunities for growth
- Regular team activities and gatherings
- Comprehensive onboarding process with a dedicated ramp-up period
- A supportive team that values open communication and direct feedback
- A chance to excel in your career and make a difference

### What we are looking for:

- 3+ years development / devops experience
- Proven experience in desktop testing
- Prior experience with testing in different environments (e.g. Windows/ Apple) and devices (laptop/ desktops)
- Experience in quality control, ensuring standards and processes are followed
- Basic knowledge of coding and apps, enabling effective communication with developers

### Additional Requirements:

- Proficiency in JavaScript, Puppeteer and Playwright (Pré)
- Strong ability to analyze technical documentation and identify key requirements.
- Problem-Solving: Excellent problem-solving abilities to diagnose and resolve complex software issues.
- Effective communication skills, both verbal and written, for collaborating with teams and clients.
- Adaptability: Ability to adapt to various programming environments and quickly learn new technologies.
- Teamwork: Strong team player with the ability to work in cross-functional teams.
- Time Management: Excellent organizational and time-management skills, with the ability to handle multiple tasks simultaneously.

- Join us to shape the future of software escrow!

## How to Apply

Please send an application that speaks directly to how you would like to fill this position. There are no right answers or expectations. Show us your role in our company's future and our role in yours. Address some of the work we do. Introduce yourself as a colleague. Feel free to respond in either Dutch or English.
