Job Title: Senior Software Development Engineer in Test (SDET)

Company Name: Navro

Share

Description

We are seeking a Senior Software Development Engineer in Test (SDET) to join our early-stage FinTech!

We're looking for an enthusiastic and driven Software Developer in Test to join our dynamic and growing team. At Navro, we value diversity and are committed to creating an environment where everyone feels supported and empowered to contribute their unique perspectives. At Navro, we're not just offering a job - we're offering an adventure alongside a great team.

Who we are

We are transforming payments for global platforms and e-commerce businesses. As the world's first payments curation platform, we simplify cross-border transactions by uniting best-in-class infrastructure into a seamless ecosystem, enabling businesses to scale and operate effortlessly across borders. Our platform empowers businesses to pay international workforces, sellers, and suppliers quickly and reliably while optimizing costs and enhancing payment experiences. By combining innovation with compliance and scalability, we are shaping the future of payments for modern global businesses and their ecosystems.

We are building a workplace that encourages growth, development, and fun. Working in a startup can be both rewarding and challenging, we'll be with you throughout the highs and lows as one team. We need people who have passion, resilience, and willingness to find solutions, not just problems, and work well within our global team of almost 30 nationalities.

The role

As a Senior SDET, you will be responsible for designing, co-developing, and automating software test plans and test cases to ensure the quality and reliability of our services. You will drive continuous improvement through experimentation, retrospection, and innovation, keeping our testing processes ahead of the curve. Our backend is developed predominantly on Java with SpringBoot and SpringCloud, and our frontend in Next.JS. We are deploying to K8S with GitHub Actions and ArgoCD on AWS, but remain somewhat cloud agnostic as we are pursuing a multi-cloud strategy.

Requirements

To be successful in this role, you:

- Must have strong programming skills with a solid knowledge of Java and ideally JS
- Must know software testing methodologies like Behavior-Driven Development and testing principles, such as functional testing, component testing, integration testing, regression testing, and performance testing
- Have practical experience with Contract Testing using Pact
- Are very familiar with performance & load testing tools.
- Be an advocate of the need to engage testing early in the feature definition process
- Can mentor engineering teams, assist them by identifying testing goals and needs, and drive a culture of knowledge sharing in order to close knowledge gaps.
- Can help foster an environment of psychological safety that enables team members to thrive. This is very important to us, as we are a highly diverse group made up of people from many different ethnicities, religious beliefs, and gender identities
- Experience in Payments or a FinTech industry would be nice to have but not a strong requirement
- **Personal Attributes:**
 - Ability to mentor and guide team members
 - Excellent problem-solving and analytical skills
 - Ability to thrive in a fast-paced environment with the capacity to work both independently and collaboratively
 - High degree of empathy and situational awareness
- You may not possess every single required skill listed, and that's perfectly fine. If you have most of them, along with grit, passion, a desire to learn quickly, and the willingness to get stuck in, we encourage you to apply.
