Job Title: QA Automation Engineer

Company Name: Azumo

Share

Description

Azumo is currently looking for highly motivated QA Automation Engineers to test in a mix of technologies including web, cloud, microservices, SQL and NoSQL environments, and big data solutions. Products and features under development are used by millions of users, and the QA Engineer will be expected to be the quality gatekeeper for the product. The position is fully remote based in Latin America.

This position will allow you to collaborate with a growing team and bright engineering minds in backend, analytics, and big data computing. You will enjoy the role if you love creating test strategies for novel products, automating testing processes, and owning releases for your teams.

Responsibilities:

- Develop test plans to observe product scalability, fault tolerance, stability, and backward compatibility for products under development
- Develop, improve, and maintain scalable test automation strategies
- Evaluate multiple approaches and technologies to implement on test methodologies
- Diagnose, track, and manage quality issues to resolution
- The QA Engineer will be based in Latin America. Compensation commensurate with experience and candidate potential.

At Azumo we strive for excellence and strongly believe in professional and personal growth. We want each individual to be successful and pledge to help each achieve their goals while at Azumo and beyond. Challenging ourselves and learning new technologies is at the core of what we do.

Requirements

Basic Qualifications:

- BS or Master's degree in Computer Science, related degree, or equivalent experience
- 4+ years in software testing, writing tests (automation), and test development roles
- 1+ years of coding experience in Java and Python
- Experience with automated tools and testing frameworks, including performance testing (load and concurrency)

Preferred Qualifications:

- Experience testing in a distributed system, service-oriented architecture
- Experience with big data platforms such as Hadoop and Kafka
- Working knowledge of cloud technologies (AWS EC2, Docker, Redshift, EMR)
- Testing experience for analytics, dashboards, and visualization software products.

Benefits**Company benefits include:**

- Paid time off
- English classes
- US Hollydays
- Training
- Udemy free access
- Mentored career development
- U\$S Remuneration
