Responsibilities & Context

The Quality Assurance Engineer reporting to the QA Manager (PMO), will work with business and development teams to define, design, document, and execute functional regression tests to ensure that new and existing systems, features, and applications meet quality and performance expectations.

Job Responsibilities:

- Participate in functional requirement and code reviews as applicable.
- Accountable for ensuring test coverage and mapping of requirements to tests.
- Ensure tests are self-contained, well-documented, maintainable, and reusable.
- Participate in test data analysis and create test data for multiple or complex projects.
- Execute systems, functional, and end-to-end test scenarios and cases.
- Participate in risk-based analysis for test execution.
- Ensure the test environment reflects the requirements for test execution.
- Write and reproduce accurate software problem reports, including steps to reproduce the defect.
- Work closely with the Business Analyst and Developers to resolve defects.
- Analyzes and reports overall test status and results of test case execution.
- Review test results, apply analytical skills to identify when issues need to be escalated, and identify associated risk and/or impact.
- Define tests to be added to a regression/automation suite
