Job Title: QA Automation Engineer

Company Name: Keeper Security

Share

Description

Keeper Security is hiring an Automation Engineer, where you'll develop and execute automated test scripts, enhance test suites, and collaborate with cross-functional teams to ensure seamless user experiences across web applications. This is a 100% remote position!

Keeper's cybersecurity software is trusted by millions of people and thousands of organizations, globally. Keeper is published in 21 languages and is sold in over 120 countries. Join one of the fastest-growing cybersecurity companies and be responsible for developing and executing automated tests, enhancing test suites, and ensuring the quality of our web applications.

About Keeper

Keeper Security is transforming cybersecurity for people and organizations around the world. Keeper's affordable and easy-to-use solutions are built on a foundation of zero-trust and zero-knowledge security to protect every user on every device. Our award-winning, zero-trust, privileged access management platform deploys in minutes and seamlessly integrates with any tech stack and identity application to provide visibility, security, control, reporting and compliance across an entire enterprise. Trusted by millions of individuals and thousands of organizations, Keeper is an innovator of best-in-class password management, secrets management, privileged access, secure remote access and encrypted messaging. About the Job

We are seeking an experienced and detail-oriented Automation Engineer to join our team. In this role, you will develop and execute automated test scripts using the Cypress framework, ensuring seamless functionality for web applications. You will collaborate with cross-functional teams to define, design, and implement effective test automation strategies, while maintaining and enhancing existing test suites in alignment with application updates.

Responsibilities:

- Develop and execute automated test scripts using Cypress framework
- Collaborate with cross-functional teams to define, design, and implement test automation strategies

- Perform end-to-end testing for various web applications to ensure seamless user experience
- Analyze test results, generate reports, and provide feedback to the team
- Integrate manual test paths using API scripts into software UI for process automation
- Participate in code reviews and ensure adherence to best practices in test automation
- Work with other software engineers to optimize automation development improvement and its functionality

Requirements

- 3+ years of programming experience with Java, JavaScript and Python
- Knowledge with Cypress and dashboards
- Strong problem solver with focus on code design, quality and architecture
- Working knowledge of software development methodologies and tools including experience with automated build systems, version and project control and issue tracking systems
- Familiarity with relational databases (SQL server, MySQL, etc.)
- Experience with other testing frameworks or tools (e.g., Selenium, Mocha, Jest) is a plus

Benefits

- Medical, Dental & Vision (inclusive of domestic partnerships)
- Employer Paid Life Insurance & Employee/Spouse/Child Supplemental life
- Voluntary Short/Long Term Disability Insurance
- 401K (Roth/Traditional)
- A generous PTO plan that celebrates your commitment and seniority (including paid Bereavement/Jury Duty, etc)
- Keeper Security, Inc. is an equal opportunity employer and participant in the U.S. Federal E-Verify program. We celebrate diversity and are committed to creating an inclusive environment for all employees.
