## Job Title: QA Engineer

**Company Name: Activate Interactive Pte Ltd**

Share  f  in  X

## Description

Activate Interactive Pte Ltd ("Activate") is a leading technology consultancy headquartered in Singapore with a presence in Malaysia and Indonesia. Our clients are empowered with quality, cost-effective, and impactful end-to-end application development, including mobile and web applications and cloud technology, that remove technology roadblocks and increase their business efficiency.

We believe in positively impacting the lives of people around us and the environment we live in through the use of technology. Hence, we are committed to providing a conducive environment for all employees to realize their full potential, who in turn have the opportunity to drive innovation continuously.

We are searching for our next team members to join our growing team.

If you love the idea of being part of a growing company with exciting prospects in mobile and web technologies that create a positive impact on people's lives, then we would love to hear from you.

The co-development Business Unit is looking for QA Engineer

This is a contract role. Duration: April 2025 to March 2026

## What will you do?

1. Tech design, development, test, and operation of clinical decision support system's trial implementation.

- Tech design based on the requirement provided by the business team
- Implementation of applications, services, and integration
- Testing and quality management of the solution including but not limited to unit test, functional test, e2e test, test automation, etc.
- Security monitoring, enhancement, and issue fix
- Cloud environment and deployment management
- Operation and maintenance of platform and tech support provisioning

2. Documentation

- Tech design documentation (e.g. architecture, ERD, API specifications, flow chart, etc.)
- Operational runbooks (e.g. admin manual, deployment manual, backup & restore plan, etc.)

3. Collaborating with other tech teams on service integration, deployment, and debugging as needed.

## Requirements

What are we looking for?

- Degree in software engineering, computer engineering, electrical engineering, or infocomm-related discipline.
- At least 5 years of hands-on experience
- Excellent verbal communication skills
- Proactive, self-driven, and self-motivated

To support service-based architecture design and implementation for backend services/components and frontend for developing a clinical decision support system for GP clinics.

To lead test strategy, planning, automation, and test case design and provide support on test implementation together with the developer.

Must be familiar with prevailing test framework and its use in quality control of software development.

Familiar with the tool of QMetry

## Benefits

What do we offer?

Fun working environment

Employee Wellness Program
