Job Title: Quality Assurance Engineer I, Music Client QA

Company Name: Amazon

Share f in ✕

DESCRIPTION

Amazon Music is an immersive audio entertainment service that deepens connections between fans, artists, and creators. From personalized music playlists to exclusive podcasts, concert livestreams to artist merch, Amazon Music is innovating at some of the most exciting intersections of music and culture. We offer experiences that serve all listeners with our different tiers of service: Prime members get access to all the music in shuffle mode, and top ad-free podcasts, included with their membership; customers can upgrade to Amazon Music Unlimited for unlimited, on-demand access to 100 million songs, including millions in HD, Ultra HD, and spatial audio; and anyone can listen for free by downloading the Amazon Music app or via Alexa-enabled devices. Join us for the opportunity to influence how Amazon Music engages fans, artists, and creators on a global scale.

Position Overview -

- QAEs are also responsible for driving our software development process toward quality-centric methodologies and for reporting on test progress, metrics, issues and risks.
- Writing test cases, Test Plan and Strategy that are high quality, high value and maintainable.
- Able to reproduce product defects & script failures to assist developers or other testers and identify, track, and accurately report defects found.
- You create automation scripts for low complexity test cases based on feasibility analysis done by the QA / DEV teams.
- You acquire knowledge of the features and detailed functional requirements of the work to execute your assigned tests, and find gaps in the test plan/test coverage.
- QA Engineers also work with groups such as Product Management, User Interaction, and Customer Support to understand customer usage models and develop test plans and suites that approximate real-world environments and regression tests.
- Ability to deep dive on applications & comparing features between various versions & identifying changes made within versions

Key job responsibilities

- Drive the Feature release E2E.
- Create Automation script for new features and ensure the stability
- Write test cases for the new feature, modifying and maintaining the existing test cases.
- Understand and ramp up on QA procedures, guidelines and policies for newly launched feature and apply them

- Be part of a highly charged work environment

BASIC QUALIFICATIONS

- 2+ years of quality assurance engineering experience
- Experience in manual testing
- Experience in automation testing
- Experience in quality assurance engineering

PREFERRED QUALIFICATIONS

- Experience in API & Mobile testing
- Experience designing and planning test conditions, test scripts, and test data sets to ensure appropriate and adequate coverage and control
