Job Title: QA Engineer
Company Name: talvette

Share f in X

Company Description

Our client is a software development and project management company that leads digital transformations for clients by managing and modernizing mission-critical systems and integrating them with new digital solutions and data analytics to produce better business outcomes. They imparted more than 20+ years of skilled resources, long-term proven reliability, and investment protection, as well as its many certified IT security standards, which help them to be a trustworthy company across the Industry.

Tech Stack

- Selenium, Appium, Node, Python, Postman

Key Responsibilities

- Create and maintain automated tests for web stack applications using tools such as Selenium or Appium.
- Automate API testing and network application testing.
- Conduct functional and performance testing of web stack and distributed applications.
- Work closely with development teams to ensure the quality of the product throughout the CI/CD lifecycle.
- Collaborate with network engineers to test networking components and APIs.

Skills & Qualifications

- 3+ years of experience in coding (Node, Python, Postman).
- Experience with test automation platforms (Selenium, Appium, Robot).
- Strong understanding of API lifecycle, networking, and security.
- Experience with functional and performance testing for web and distributed applications.
- Nice to know CI/CD pipeline integration.
- Nice to have experience with containerized environments like Docker and Kubernetes.
