Job Title: QA Engineer (exaBase Studio)
Company Name: ExaWizards

Share 🅕 🅛 🆇

Company Overview

We are a company that strives to achieve a happy society through solving social issues using AI. As a solution for improving labor productivity in an aging society with a declining birthrate, we are dedicated to creating a variety of services using our unique AI technology and AI platforms.

Founded in 2016, we went public in November 2021. Our performance has been growing year by year, and especially in the fiscal year 2023, with the explosive popularity of generated AI, it is predicted that conversational AI will be incorporated into 40% of enterprise applications by 2024, creating a favorable market environment. In the fiscal year 2023, our sales reached approximately 8.3 billion yen, and the number of members expanded to around 400 at the head office alone. With the dynamic evolution of our business environment, including the acquisition of two subsidiaries and the formation of one Group Company, we are actively seeking new team members to realize new services and businesses aimed at solving social issues.

Product introduction / プロダクト紹介

exaBase Studio is a no-code development environment that integrates the multiple AI that we have accumulated over the years and enables the design and development of data processing required for business. exaBase Studio is a web application with a highly interactive UI, including a canvas function that enables real-time collaborative editing.

Qualifications (Required) / 必須要件

- 3+ years' experience testing web systems, both using hands-on manual approach, and creating/coding automated testing (ex: Espresso, XCUITest, PlayWright).
- Experience designing/implementing tests, test management, optimizing tests.
- Solid understanding of Quality Assurance principles and methodologies.
- Ability to work closely with the development team on the design and implementation of new features and libraries for automation frameworks.
- Business-level English and conversational Japanese OR Business-level Japanese and at least reading and writing capabilities for English.

Qualifications (Welcome) / 歓迎要件

- 1+ years of hands-on software development experience using any language.
- Experience in containers and container orchestration: NGINX, Docker, Kubernetes.
- Background in computer science or a related field.
- Product and service development experience.
- Experience working in a startup environment.

· We are seeking an exceptional Platform QA Engineer (in Test) to support and develop Exabase Studio. You will be focused on solving challenging frameworks, scalability & stability problems that will enable the company to deliver a product at high scale without compromising on quality, velocity, and coding standards. The ideal candidate will have expertise in building reliable and robust test automation frameworks for both front-end and back-end applications. They will also have interest, background, and experience in DevOps, infrastructure as code, build automation, tooling, and release engineering. The candidate should also be passionate about providing world-class customer service with a sharp focus on automating, deploying,g and managing a reliable, robust, high-quality software CI/CD pipeline infrastructure and their associated services.

· If the candidate does not have the ideal expertise or experience, don't worry. As long as the candidate is passionate about gaining expertise and experience, we welcome such candidates.
