Job Title: Automation Engineer

Company Name: Tekarsh

Share 🅕 🅛 🅧

About the Role:

As an Automation Engineer, you'll build automated tests to ensure reliable web applications, collaborating closely with developers and supporting Agile processes. This role offers growth in a dynamic team setting.

Key Responsibilities:

- Write robust and clean code to ensure the reliability and functionality of web applications.
- Work closely with other developers to review code, share best practices, and continuously improve the development process.
- Develop and maintain automated test scripts using the latest automated tools like Cypress, Playwright, etc.
- Ensure activities planned in a sprint are completed on time.
- Identify and escalate risks.
- Document, track, and prioritize defects.
- Create and manage test data sets required for automated testing.
- Maintain test documentation and create new test plans for automation.
- Integrate and optimize automated tests into AWS CI/CD.
- Continually enhance skills and build knowledge in all aspects of the organization.

Qualifications:

- Bachelor's in Computer Science or related fields.
- 0-2 years of experience.
- Strong knowledge of JavaScript is mandatory.
- Strong problem-solving skills with a keen attention to detail.
- Ability to quickly learn and implement new technologies.
- Familiarity with version control systems like Git is mandatory.
- Effective communication and collaboration skills to work with cross-functional teams.
- Familiarity with Agile development methodologies.
