Job Title: QA Tester
Company Name: Planet.fans

Share f in X

Careers at Planet. fans

Artists have so much more opportunity to engage with their fanbase and mobilise them before, during, and after shows, creating a more sustainable way to access this audience when they are not touring while driving better year-round returns.

Using our pioneering AAA for artists approach, we unlock the true lifetime value of fans by creating customised experiences, whether related to content, tickets, merch, or memberships. Planet is integrated into the apple and Google wallets to provide a two-way direct-to-fan platform. no app to increase fan expectations, this becomes a light touch but high engagement channel, free from algorithms which make sure fans are always reached in the biggest moments of each artist's campaign.

Description

About Us: Shaping the Future of Live Events

We're building a membership platform for the future of live events that prioritizes and rewards loyal fans.

At the heart of every meaningful live event lies the desire to feel connected, valued, and part of a shared community. That's why we built Planet, an end-to-end membership platform that allows artists, venues, and brands to understand their audiences truly.

But we don't stop there. Through The Beat, our personalization engine, we go beyond one-off, transactional moments and establish lasting connections with fans. By harnessing insights and learnings from over two years of research into fan engagement, we're building a future where:

Loyal fans feel truly seen and prioritized

Engagement is as seamless and as simple as possible to action

Our vision is to enable impactful, personalized interactions with every fan, fostering deeper connections and more valuable communities. Together, Planet and The Beat help remove the time and resources traditionally required for fan engagement, making it effortless to take every campaign and live event to the next level.

Sounds great! What's my part in this?

users.

This is an opportunity for someone with strong attention to detail, excellent communication skills, and an interest in product development to make a meaningful impact on our platform

Key Responsibilities:

- Refine acceptance criteria by working closely with product managers and developers.
- Write BDD (Behaviour-Driven Development) scenarios to define expected application behaviour.
- Manually test new features to ensure they meet business and user requirements.
- Log and track defects, collaborating with developers to diagnose and resolve issues.
- Ensure clear and structured documentation of test cases, scenarios, and results.
- Verify bug fixes and perform regression testing to maintain platform stability.
- Develop a deep understanding of our platform to provide meaningful test coverage.

Requirements

- Experience in manual testing of web applications and APIs.
- Strong attention to detail and a methodical approach to testing.
- Excellent communication skills to collaborate effectively with teams.
- Ability to refine acceptance criteria and write clear, structured BDD scenarios (e.g., Gherkin syntax).
- Strong problem-solving skills with an analytical mindset.
- Interest in product development and user experience.

Benefits

- Competitive salary based on experience, with performance-based incentives.
- Exciting growth opportunity – We're approaching Series A funding, so you'll play a key role in shaping the company.
- 25 days holiday + UK public holidays + extra paid time off between Christmas & New Year.
- Remote-first working model (UK-based team), with the option to work from our London office.
- Regular team get-togethers and career growth support through one-on-ones and creative sessions.
