Job Title: Senior Software Quality Assurance Engineer & Tester
Company Name: SJ Group

Share

About SJ:

SJ is a diverse collective of problem solvers for the built environment, continually reimagining ways to create a smart and sustainable future. A global urban, infrastructure and managed services consulting firm with over 70 years of track record in successful project delivery, SJ has built more than a million homes in Singapore, created master plans in more than 60 countries and developed over 100 industrial parks globally. Our integrated solutions teams help clients optimise and gain better control of your asset portfolios. Using world-class processes and systems, Surbana Jurong delivers a complete life-cycle approach to monitor and manage asset performance, resulting in productivity gains, cost reduction and integrated solutions to build and manage future-ready cities.

Primary Purpose of the Position:

Headquartered in Singapore, we are currently hiring "Senior Software Quality Assurance Engineer & Tester" to join the team. If you love building high-impact products that touch the lives and stomachs of millions of users, working alongside a talented, world-class team, we want to hear from you.

Key Responsibilities:

Develop and execute detailed test documentation, test plans, test cases, test scripts and test report based on project specifications and requirements.

Collaborate closely with development, product management, and other stakeholders to ensure quality is integrated throughout the software development lifecycle (SDLC).

Conduct both manual and automated testing to assess software performance, usability, and scalability.

Collaborate with cross-functional teams to understand end-user requirements and ensure product quality aligns with user expectations.

Analyze the system's quality to determine whether it is good enough to be released, and if necessary, plan quality improvement measures and instruct them to the developers.

Research and evaluate the latest testing technologies and tools, and adopt them to each project if useful.

Key Qualifications, Knowledge, Skills, Experience:

B.Sc. in Computer Science or equivalent from any reputed university.

Minimum 5 years of experience in software quality assurance.

Experience with multiple types of testing (e.g., regression testing, ad hoc testing, feature testing, user acceptance testing, user interface testing, integration, performance testing, security testing).

Designing and executing test cases to validate the functionality, performance, security, and compatibility of APIs.

Implementing robust and maintainable automated test scripts using industry-standard frameworks (e.g., Selenium, Cypress, Playwright) to streamline regression testing, improve efficiency, and enhance test coverage.

Planning and executing comprehensive load tests to assess application behavior under increasing workloads, identify potential performance bottlenecks, and ensure scalability.

Ability to identify, analyze, and troubleshoot software defects and inconsistencies.

Solid experience using JIRA and/or any test case management tool.

Ability and enthusiasm to work in a global and multicultural environment.

At Surbana Jurong, we put talent, hard work, teamwork and a fun workplace together to approach problems and solve them creatively and collaboratively. Join us in making a positive impact on the world!
